

A decorative graphic on the right side of the slide, consisting of a grid of squares in various shades of green (from dark forest green to light lime green) and black, arranged in a pattern that resembles a stylized arrow or a series of overlapping steps pointing towards the top right.

Energy Drinks & Teen Athletes

Presentation overview

- Why it matters
- Performance
- Downsides
- Comparison
- Takeaway

Why it matters

Performance drinks are marketed to boost energy & metabolism

BUT the scientific evidence is mixed & potential side effects are significant

Health Risks

Excessive sugar & caffeine consumption
→ severe headaches, dizziness, &
nervous jitters

Performance Impact

Initial "rush" is followed by a crash →
tiredness & diminished reaction times

Performance

Energy drinks mix caffeine, sugar & other additives claim to boost energy

BUT they cause crashes & side effects

Sugar

Energy drinks have a lot of sugar → quick energy followed by a crash

Caffeine

Energy drinks contain lots of caffeine → jitters, headaches & sleep problems

Downsides

Athletes may get improvements in focus, jumping, & sprinting

BUT energy drinks can cause mental & health issues

High Blood Pressure

Energy drinks raise blood pressure & heart rate

Shakiness

Energy drinks cause a crash after the boost → shakiness & less focused

Anxiety

Energy drinks cause mental problems → anxiety

Comparison

Brands Metrics	Red Bull (8.4 oz)	Celsius (8.4 oz)	Monster (8.4 oz)
Caffeine	80 mg	200 mg	160 mg
Sugar	27,000 mg	21,000 mg	21,000 mg
Price	\$2.25	\$2.75	\$2.68
Taurine	1000 mg	1000 mg	2000 mg

The Big Takeaway

Energy drinks give energy & cause crashes, while sleep, water, & good food are safer for teen athletes

We still need more research on how these drinks affect teen athletes
